Subject/Issue(s) Discussed: Called to discuss the dam and the impending stability investigation. He asked about lowering the lake slowly because of a concern of slope failures around the shoreline due to very steep slopes. Some may affect foundations of houses around the shore. Also, he was concerned about operating the low level gate valve if it jamming open due to debris. It has never been opened to his knowledge. We discuss the preliminary soil investigation/slope stability analyses and the results. He noted that wetness with the dam/abutments/downstream slope had been an issue when first filled. He has also been retained to be involved.

Action Taken: None / Told Tom about it.

Written Follow up (yes/no): No
